# Trustwave MDR Services Leveraging Microsoft Defender for Endpoints

## Key Integration Benefits

- Detect and eradicate threats
- Extend your team with elite cybersecurity expertise
- Strengthen your security posture
- Recognize value on your Microsoft Defender ATP investment

Trustwave Managed Detection and Response services leveraging Microsoft Defender for Endpoints provides you with relentless threat detection and response focused on eradicating threats.

## What We Offer

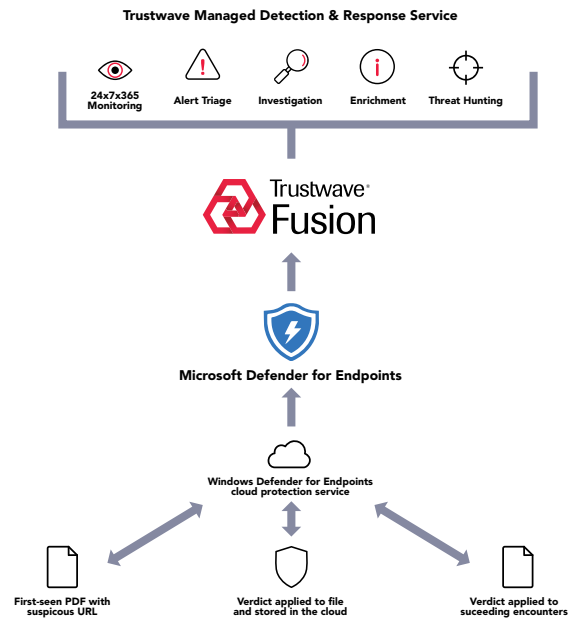

Trustwave offers two levels of the **Managed Detection and Response (MDR) Service** with Microsoft Defender for Endpoints – MDR Essential and MDR Complete.

Both levels deliver 24x7 monitoring and notification, incident response and remediation. The Complete level adds a higher level of data forensics and investigation response that includes industry leading proactive threat hunting by Trustwave SpiderLabs®.

## How We Do It

Trustwave Managed Detection and Response (MDR) services leverage the Microsoft Graph Security Application Interface Protocol (API) to correlate alerts. Using the Microsoft Defender for Endpoints API, we gain context for investigation and the ability to automate security operations.

- **Triage:** Trustwave uses the Microsoft Graph API to integrate with the Trustwave Fusion platform in order to automate the promotion process of getting actionable intelligence from Microsoft Defender for Endpoints to a security analyst.
- **Investigation and Response:** Leveraging Microsoft Defender for Endpoints, the Trustwave Global Threat Operations (GTO) team, as part of the Managed Detection and Response Essential and Complete services, conduct deeper investigation and take action with you to stop threats.
- **Threat Hunting:** Using Trustwave’s proprietary threat hunting methodology and the Microsoft Defender for Endpoints API, renowned Trustwave SpiderLabs threat hunters proactively hunt for threats using Microsoft Defender for Endpoints.
- **SOAR:** Integrated automation capabilities in the Trustwave Fusion platform with Microsoft Defender for Endpoints enable synch/resolve, enrich and search functions.
