Trustwave Security Technology Management

Benefits

- Time-to-protection within 30 days
- 24×7 global coverage by certified industry experts
- Out-of-the-box integration with the Trustwave Fusion platform to provide full transparency into the service
- Help maintain compliance with industry best-practice frameworks
- Collaborative service delivery
- A trusted partner in your growth and technology management needs

Your security technologies must be continuously monitored, tuned, and updated to maintain their health and availability. Trustwave Security Technology Management takes on this burden for you. Our certified technology experts have decades of hands-on operational experience in threat management, security policy formulation, cybersecurity best practices, and ITIL frameworks. Your technology is integrated into our cloud-based Trustwave Fusion platform, enabling you to monitor support activities, view security events, and customize reporting to track key performance indicators (KPIs).

Quick Time to Value

Trustwave's proven framework helps you achieve full protection within 30 days. The quick transition to Trustwave helps you to securely manage your technology, integrate with best of breed technologies, and realize more value from your existing security investments. We do this by making sure you have the best team from Trustwave to plan and execute on your transformation. Our process includes expert guidance to onboard each supported technology according to a clear project plan with key milestones and recurring status meetings.

Increase Your Team's Capabilities

Expand your team with our global security technology experts who are available 24×7 to support you. Our managed security professionals are certified in dozens of industry-leading technologies and have experience working with clients across numerous industry verticals. Trainings, certifications, and weekly tune-ups are part of a concerted program to ensure that we will quickly adapt to the changing needs of your environment.

We use standard industry frameworks and best practices to provide consistent, scalable change and incident management services. We also provide reports around our activities, changes, and incidents to continuously improve your security.

Strengthen Your Incident Response Posture

Trustwave Security Technology Management can be integrated with our industry leading Managed Detection and Response (MDR) platform to add enterprise threat detection capabilities and enhance response and remediation. Trustwave MDR provides a 24×7 global managed threat detection platform to identify known and emerging threats that could impact or breach your data.

Trustwave provides Managed Detection and Response services, powered with our proven Trustwave Fusion platform and best-in-class Trustwave SpiderLabs threat intelligence and expertise. Trustwave's field-proven service excellence and analyst-lauded approach drives consistent and continuous outcomes.

Built to Scale with You

As your organization grows, expands, and adds technology, Trustwave enables you to quickly integrate new technologies and understand the impact to your budget with a predictable pricing structure. Our aim is to help our clients easily manage their security technology, which means we don't do things like placing limits on how often you can contact us or subject you to other surprise costs. Our services are available as needed and on-demand.
